

Intro to Visualization Design

Yannet Interian -- USF

Agenda

- Communicating a tiny dataset
- Forms follows function
 - The functional Art, Cairo. Chapter 2
- Design Guidelines (storytellingwithdata.com/)
 - Put your thoughts into **words**
 - Be intentional in your use of **color**
 - Tell a **story**
 - Align against a common **baseline**

In class exercise

What are all of the ways you could possibly communicate a tiny data set of two numbers?

75 and 37

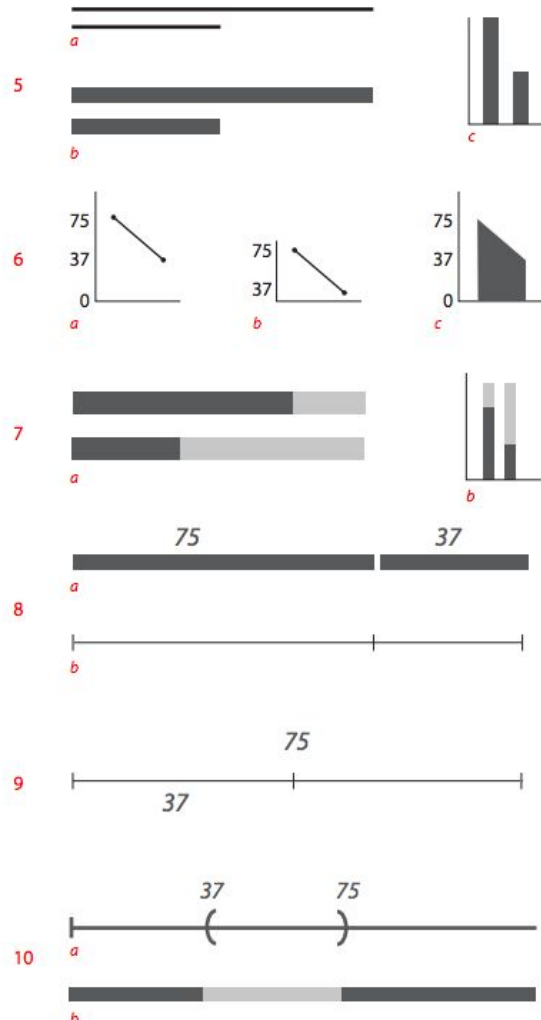

Visualizing

1. The familiar indo-arabic numerals notation, babylonian numbers notation
2. Squares
3. Repeated icons
4. Hundreds, tens, units, decimals... represented by squares

Visualizing 75 and 37

5. Bars
6. Line graphs
7. Percentages bars
8. Spliced bars
9. Proportion
10. Interval

Visualizing 75 and 37

- 11. Squares merged
- 12. Percentages in squares
- 13. Pie charts
- 14. Donut chart
- 15. Circle areas

Visualizing 75 and 37

More?

<https://s3.amazonaws.com/scribblelive-com-prod/wp-content/uploads/2012/07/poster75and37.pdf>

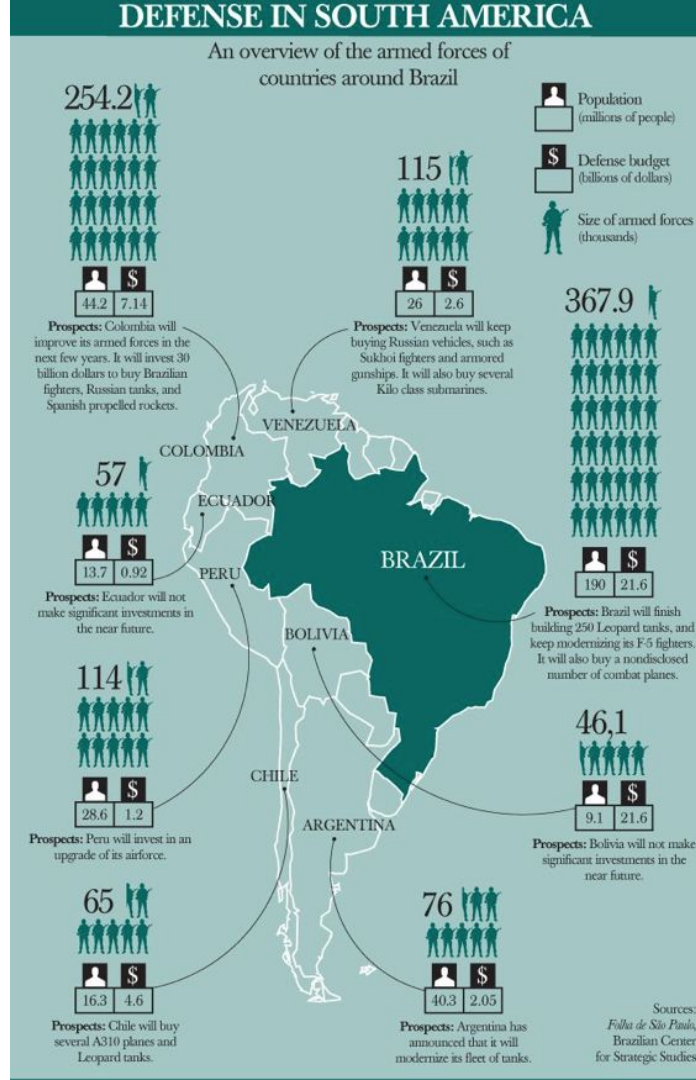

What was the point of the exercise?

- Possible combinations rises exponentially (consider richer dataset)
- Information visualization is a language
 - Explain the world
 - Tell stories
 - Point specific facts and objects
 - Elaborate ambiguous messages
- We should learn good rules to use it effectively

“Form Follows Function”

- Visualizations are not arbitrary
 - Objectivity, precision and functionality constrain the forms they take
- Ask: What is this for?
 - Present data
 - Allow comparisons
 - Organize
 - Make relationships / correlations
- Is it good at any of these?

A portrait of the power balance in South America

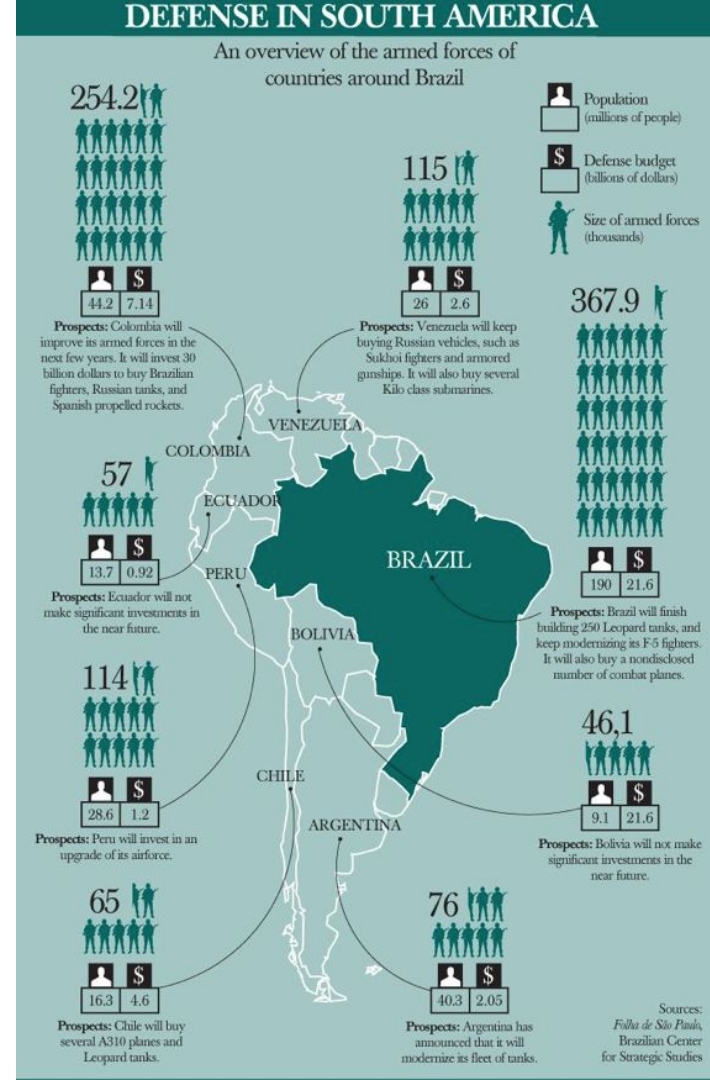

What can we learn from this graph?

What can we learn from this graph?

Any of these?

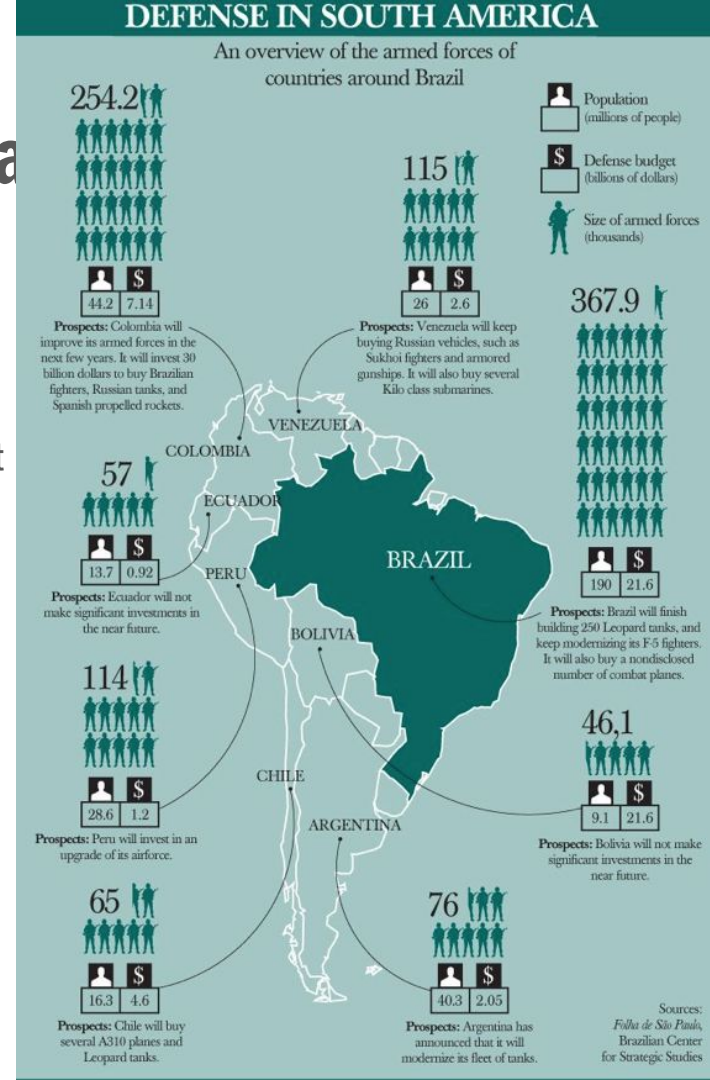

- **Present** several variables related to the topic
 - number of soldiers, population, defense budget
- Allow **comparisons**
- **Organize** countries
 - based on variables and comparisons
- Make **correlations or relationships**

What can we learn from this graph

Any of these?

- Present several variables related to the topic
 - number of soldiers, population, defense budget
- ~~Allow comparisons~~
- ~~Organize countries~~
 - based on variables and comparisons
- ~~Make correlations or relationships~~

More accurate comparisons

- Bars on the same horizontal axis allows for more accurate comparisons
- Even better use traditional bar charts

ARMED FORCES

(Thousands of people)

DEFENSE BUDGET

(Billions of US\$ a year)

POPULATION

(Millions of people)

Normalizing

ARMED FORCES EMPLOYEES PER 1,000 PEOPLE

PER CAPITA SPENDING IN ARMED FORCES *(in US dollars a year)*

MONEY SPENT ON EACH ARMED FORCES EMPLOYEE *(in US dollars a year)*

THE DEFENSE OF THE NEIGHBORS

An overview of the armed forces of countries around Brazil

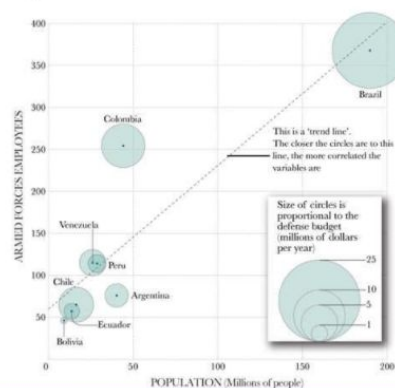

Brazil has the strongest armed forces in South America in absolute terms—

—but not in relative terms

A different look at the data

Future investments

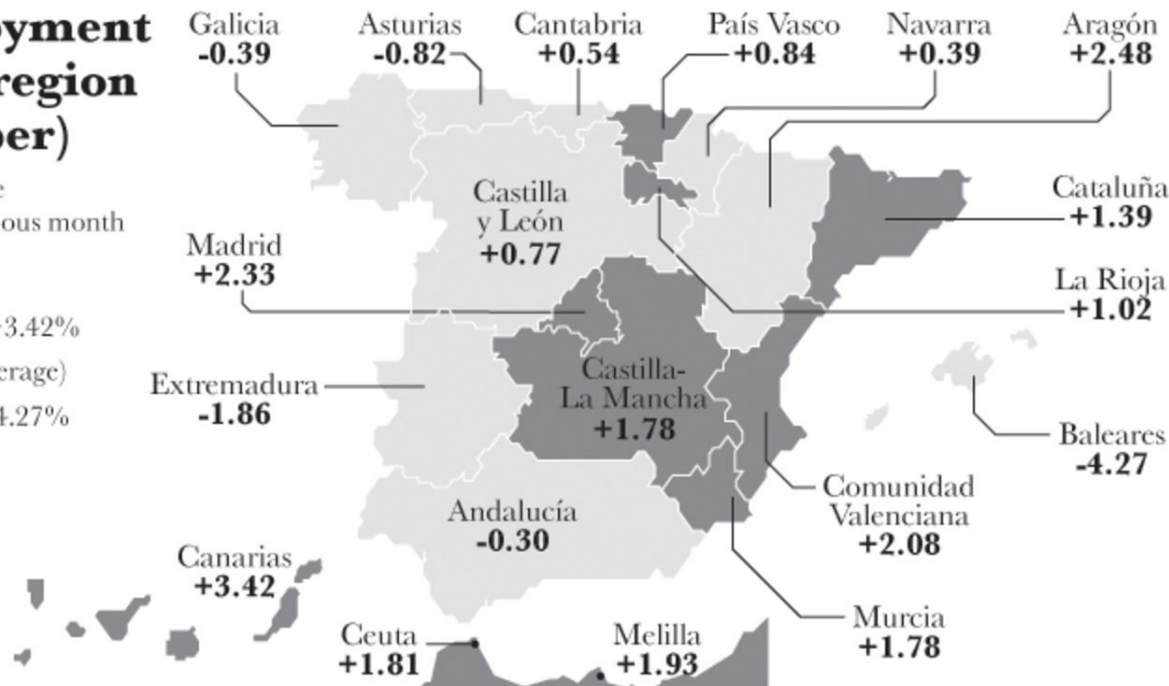

Summary

- Placing bars on the same horizontal axis allows for more accurate comparisons
 - Order the categories on increasing or decreasing order (depending on what is more important)
- Avoid using pictograms → bar chart
- Use “per capita” since the countries have very different sizes allow us to make correlations
- Highlighting the focus of the article (“Brazil”) makes for easier comparisons
- Use other graphics to look at the same data

Unemployment rates by region in Spain

Unemployment rates by region (in October)

Percentage change compared to previous month

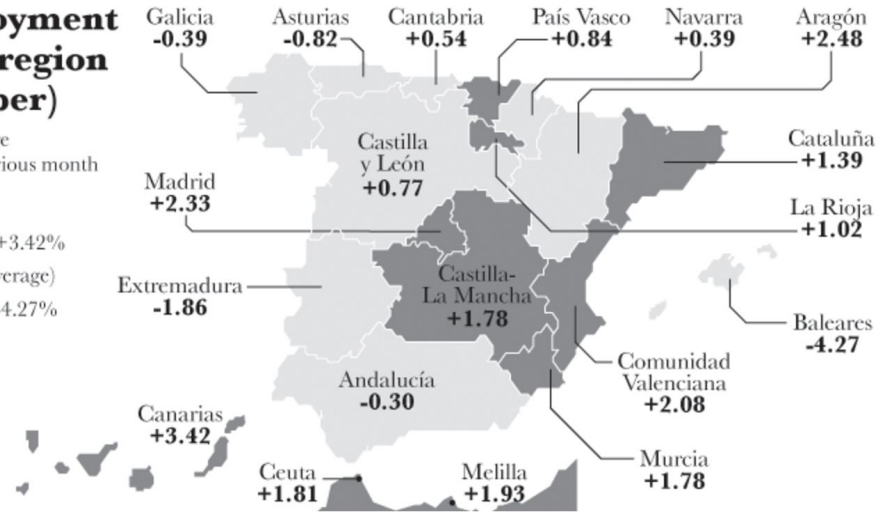

Unemployment rates by region in Spain

1. In which region has unemployment grown the most
2. In which region has it dropped the most?
3. Has unemployment change been bigger in Madrid or Canarias”?

Unemployment rates by region (in October)

Percentage change compared to previous month

Your challenges reading the chart

1. Your eyes look for the numbers mentioned in the question
2. Your brain memorizes them
3. Your brain organizes the numbers
4. Your brain compares the reorganized

Think like a Reader

If we **anticipate** questions that readers will ask, we can design visualizations so that those questions are easier to answer. How does the design assist **cognition** and **analytic thinking** about the data?

Unemployment rates by region (in October)

Percentage change compared to previous month

Canarias	+3.42
Aragón	+2.48
Madrid	+2.33
C. Valenciana	+2.08
Melilla	+1.93
Ceuta	+1.81
Murcia	+1.78
C.-La Mancha	+1.78
Cataluña	+1.39
La Rioja	+1.02
País Vasco	+0.84
C. y León	+0.77
Cantabria	+0.54
Navarra	+0.39
Andalucía	-0.30
Galicia	-0.39
Asturias	-0.82
Extremadura	-1.86
Baleares	-4.27

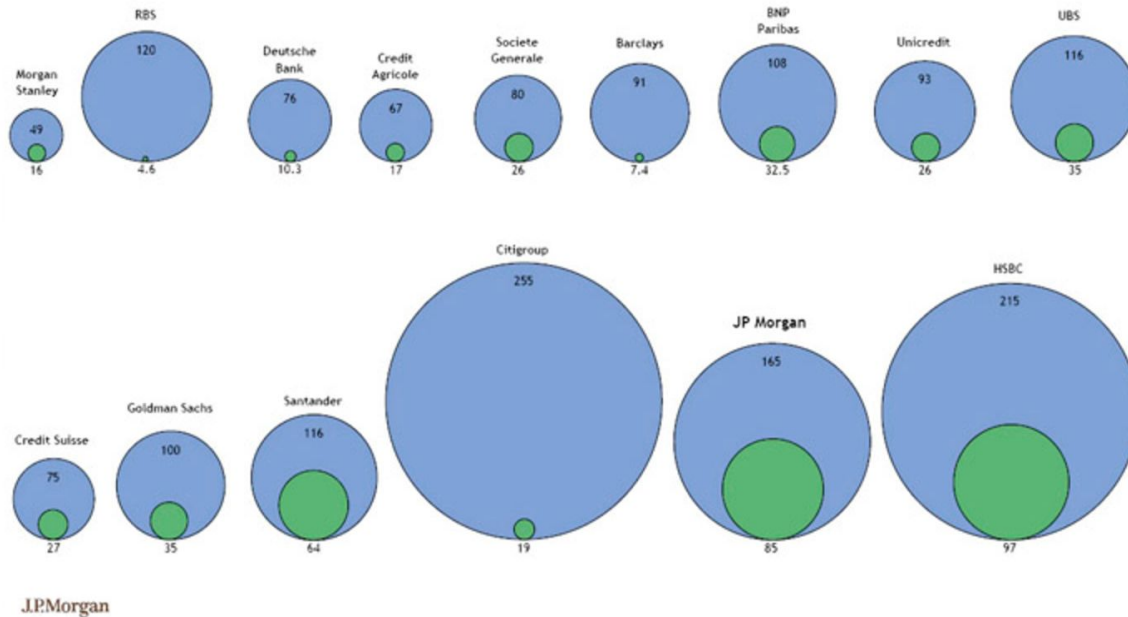

This version allows you to compare and rank Spain's regions

The bubble plague

Banks: Market Cap

● Market Value as of January 20th 2009, \$Bn

● Market Value as of Q2 2007, \$Bn

While J.P.Morgan considers this information to be reliable, we cannot guarantee its accuracy or completeness.

Source: Bloomberg, Jan 20th 2009

The bubble plague (version 2)

Market Capitalization of the World's Biggest Banks

In billions of dollars

January 2007

January 2009

Source: Bloomberg

In class quiz

Market Capitalization of Société Générale

Billions of dollars

Source: Bloomberg

January 2007

January 2009

If the grey bubble represents \$80 billion. How much is the black bubble?

Comparing bubble versus bars

Market Capitalization of Société Générale

Billions of dollars

Source: Bloomberg

January 2007

January 2009

Market Capitalization of Société Générale

Billions of dollars

Source: Bloomberg

January 2007

January 2009

Bubbles versus Bars

- Human brain is not good at estimating surface areas
- Human brain is much better at comparing a single dimension such as length or height
- You want the reader to compare areas, but they tend to compare heights

Re-Desing

- This chart orders the banks by the amount of change in %
- The chart also allows multiple comparisons

Market Capitalization of the World's Biggest Banks

Billions of dollars

January 2009 ← January 2007

Source: Bloomberg

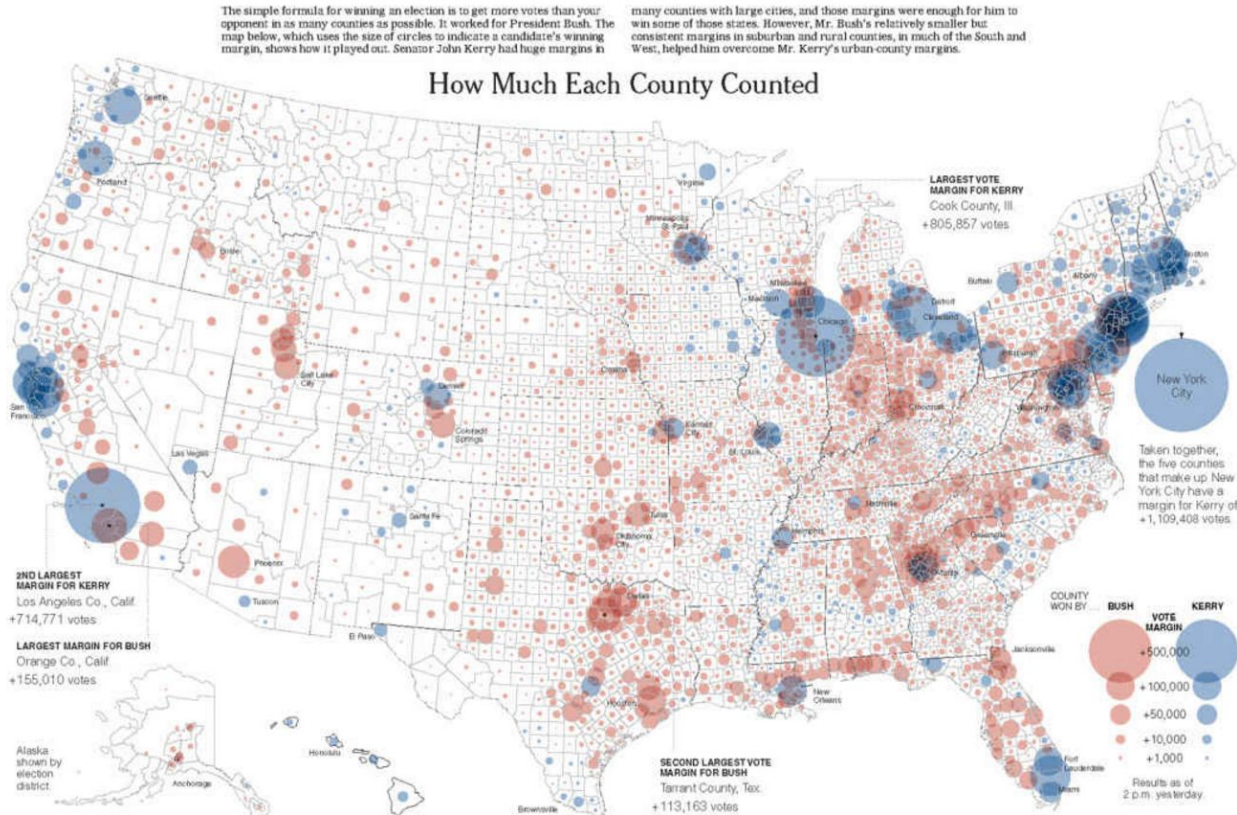

Bubbles are not always wrong

- The blanks visualization is supposed to help us make **precise** comparisons between values
- Bubbles can be effective if your goal is to show general patterns and trends and it is the case of the next visualization

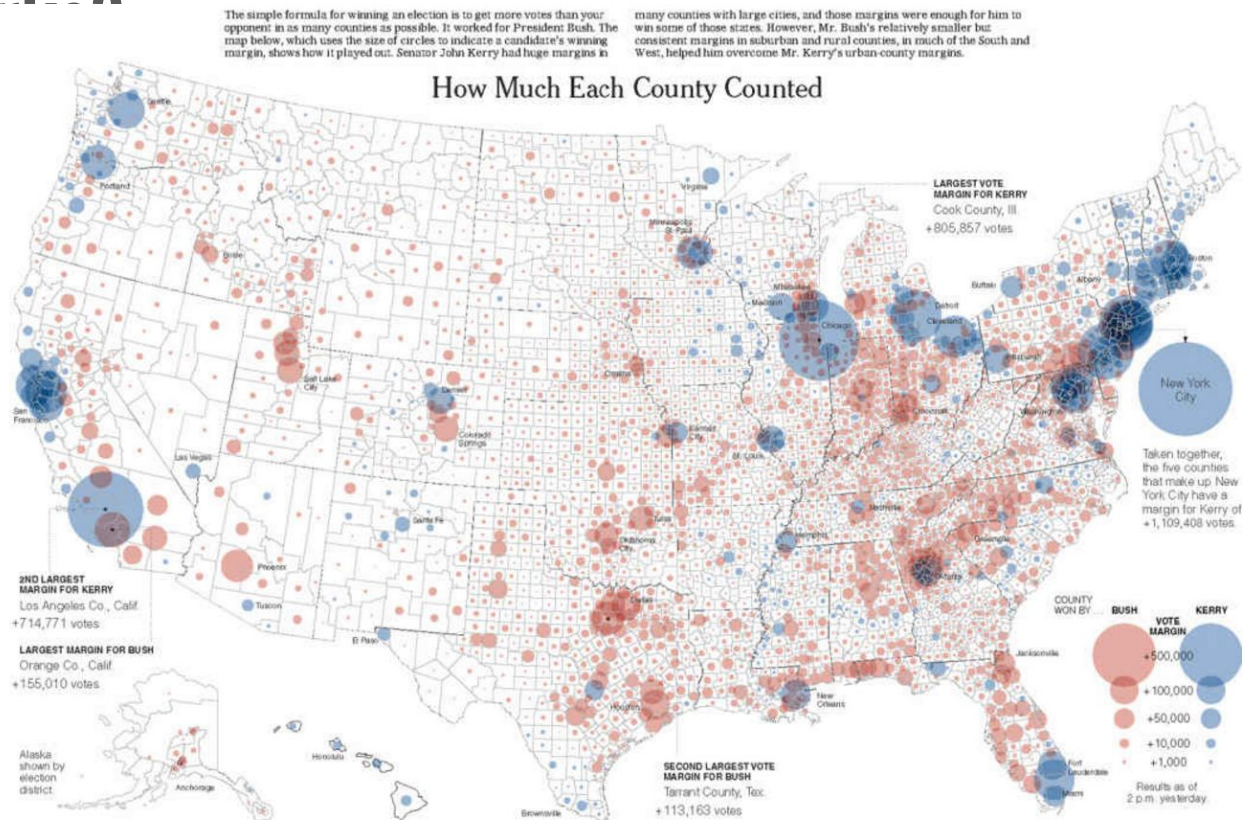

The simple formula for winning an election is to get more votes than your opponent in as many counties as possible. It worked for President Bush. The map below, which uses the size of circles to indicate a candidate's winning margin, shows how it played out. Senator John Kerry had huge margins in

- ## How Much Each County Counted

Why this map works

- Goals of this vis are different from the bank vis
- Goal here: to help reader **identify general patterns of concentration** of the Democratic and Republican votes.

Design Guidelines

storytellingwithdata.com

Text is your friend

Graph title

Any time you show data, you should have a footnote with the data source, as of date, and necessary assumptions and/or methodology (given your situation and audience).

Text is your Friend

- Every graph needs a tittle
- Every axis needs a title
- You can annotate important points directly on the graph
- Footnotes
 - Source, date, necessary assumptions or methodologies

Graph title

Any time you show data, you should have a footnote with the data source, as of date, and necessary assumptions and/or methodology (given your situation and audience).

Use this space wisely

Use this space wisely

DESCRIPTIVE TITLE

2016 Budget & Actuals

Market Conditions

Sales Forecast

Marketing Efforts

Executive Summary

ACTIVE TITLE

Spending is on track with budget

Favorable market conditions continue

Sales **expected to exceed \$4M** by Q3

Building brand awareness in 5 ways

Action or decision needed

Say what you mean

- Put your thoughts into words
- Strike a balance between spoken and written
- Avoid overly complex language -- simplify
- SOAAO*

*Spell Out Acronyms At Least Once

Be intentional in the use of color

Example: Using color smartly

Example: Using color smartly

Example: Using color smartly

Example: Using color smartly

More yogurt less fruit to increase satisfaction

Consumer feedback on Craveberry Yogurt

WHERE WE'RE ON THE MARK:
sweetness & size
rated just about right
by majority

ROOM FOR IMPROVEMENT:
more than half think
it's too thick

RECOMMEND:
increase amount of
yogurt and decrease
amount of fruit to
reduce overall
thickness

Tell a story

Tell a story

OUR GOAL:

- 1 Share the **results of the Craveberry yogurt taste test** that was conducted last month.
- 2 Recommend a couple of minor changes we believe will have a **positive impact on consumer satisfaction**.

Tell a story

Consumer feedback on **Craveberry Yogurt**

N=100 | Source: 2015 Craveberry Taste Test Report | responses to item, *How would you rate Craveberry Yogurt' when it comes to the following factors?*

Consumer feedback on **Craveberry Yogurt**

N=100 | Source: 2015 Craveberry Taste Test Report | responses to item, *How would you rate Craveberry Yogurt' when it comes to the following factors?*

More yogurt less fruit to increase satisfaction

Consumer feedback on Craveberry Yogurt

WHERE WE'RE ON THE MARK:
sweetness & size
rated just about right
by majority

ROOM FOR IMPROVEMENT:
more than half think
it's too thick

RECOMMEND:
increase amount of
yogurt and decrease
amount of fruit to
reduce overall
thickness

Align against a common baseline

Being Arrested Is Deadlier For African-Americans

Deaths per 100,000 arrests by race in the U.S., 2003-09

It is difficult to compare rate of death by type

- Great title
- Great data

Think about what you want your audience to be able to easily compare. Put those things as physically close together as you can and align them along a common baseline.

Being Arrested Is Deadlier For African-Americans

Deaths per 100,000 arrests by race in the U.S., 2003-09

FIVETHIRTYEIGHT

SOURCE: BUREAU OF JUSTICE STATISTICS

Being Arrested is Deadlier for African-Americans

- It is easier to do comparisons
- Categories have been rearranged in decreasing order

Summary

- Put your thoughts into **words**
 - Use an active title in the slice header
 - Use titles, axis titles, footnotes, annotations
- Be intentional in your use of **color**
 - Use grays, use color to emphasize your message
- Tell a **story**
- Align the things you want your audience to compare along a common **baseline**
